DETAILED ACTION

1. In response to the previous office action, Applicant has amended claims 1, 5-9, 11-16, 27, and 30 and added claims 31-51. Claims 1-51 have been examined.

Allowable Subject Matter

2. Claims 1-51 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Claims 1-34 are allowable due to the addition of a limitation to each of the independent claims that the security feature element be installed such that the housing cover of the computer could not be removed in order to remove the security feature element. No art could be found that suggested a non-removable IC card using a public-private key pair that would disable the computer if the housing were removed. The closest art, Tello, which was previously cited, discloses a system wherein a card within a computer would allow the computer to function only if a public-private key pair were on the card, but uses a smartcard as the security element, which can be removed without removing the cover. See Remarks, filed 13 September 2004, pp. 16-20.

Art Unit: 2134

Claims 35-47 are allowable because no art suggested that a determination be made as to whether or not the same security feature element was previously present. The closest art, Tello, does not have such a functionality, since the smartcard being used is meant to be removable between bootups. See Remarks, filed 13 September 2004, pp. 20-21.

Claims 48-51 incorporate all of the limitations of the original claim 15, which has previously been indicated as being allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. The following is a statement of reasons for the indication of allowable subject matter: It would be impossible to modify the invention of Tello such that card information could be simultaneously deleted both from the card and the computer, since a working card must always be in the system to keep it running. No other art could be found that would render this claim unpatentable, in view of the limitations of the base claims.
